 - Speed Isolation Card
 - Speed Control Card
 - Head Control Cards
- System Control and Communication
- Troubleshooting
 - Overview
 - Simulator - hands on
- Conclusion

NOTE: It is highly recommended that the attendees be familiar with the operation of the front end computer. This can be accomplished by reading the operator section of the manual provided with the machine and watching the operators run the Slitter/Scorer. Additional practice can be achieved by purchasing the Slitter/Scorer simulator disk which will run on most IBM compatible computers.

Please discuss this with the Education and Training Department after reviewing this agenda. This has been written for all possible machines; some equipment may not apply for a particular class and will not be covered. Specific order for class may vary upon equipment presented.
