Touch Screen to Pushbutton Conversion

Upgrade Applications

Applicable to Ward Command Dynamix machines where functional controls are operated through a section mounted touch screen.

Upgrade Description

Easy to use and maintain pushbutton switches replace expensive, maintenance intensive touch screen control panels. Highly visible pushbutton controls reduce the learning curve for machine side operation and have durability standards that are better suited to the machine operating environment.

Benefits:

- Dependable
- Simple design
- Short learning curve
- Low maintenance costs
- Replacement parts readily available

Components:

- Switch panel with applicable switches and indicator lights
- Allen-Bradley Micro Logics 1200 PLC attached to switch panel
- Revised machine program
- Additional wiring (if needed)
- Operator training for new control system
- Operator documentation

Option Features:

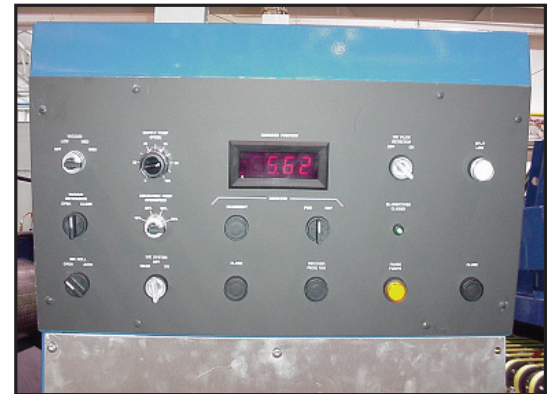

- Digital readout (see picture) to be able to adjust registration at each section rather than only at the machine console
- Allen-Bradley switches and components

Pricing, Installation, and Delivery

Contact you MarquipWardUnited Regional Product Support Manager or Regional Customer Service Support Office for pricing and delivery.

Downtime

Typical installation requires 8 hours per section with one technician and assistance from your maintenance department.
